

LPIC-2 exam preparation course (code: LC-ADMIN-LPIC2-PREP)

Overview

A preparatory course for the LPIC-2 - *Advanced Level Linux Certification*; this training a part of our LPIC-2 certification path. This training a a followup for our Linux Administrator Course, intended for participants interested in acquiring the LPIC-2 certification. The material in these two training courses combined covers all the exam requirements (and the necessary, fundamental topics needed to learn it from ground-up).

For persons interested in a deeper exploration of the topics mentioned during the training, we recommend the Advanced Linux Administrator course, which provides a hands-on workshop on several useful technologies.

Duration

4 days

Agenda

1. DNS server
 - Server configuration
 - DNS zones and their transfers
 - DNSSEC
2. DHCP server
 - Server configuration
 - BOOTP and DHCP protocols
 - Best practices in maintaining DHCP servers
3. LDAP directory services in Linux
 - Using the LDAP client; data modification
 - Importing and adding objects
 - Managing users
4. Linux kernel
 - Compilation - when and how to compile the kernel
 - Patches: applying and removing
 - Managing kernel modules
5. Disk management
 - Configuring and using RAID 0, RAID 1 and RAID 5
 - Configuring and using LVM logical volumes
6. Creating backups using rdiff-backup
 - Backup strategies and best practices
7. Filesharing via NFS
 - Configuring NFS: client- and server-side
 - Basic tools
 - Access control
8. Automatic filesystem mounting - AutoFS
9. Proxy servers - Squid
10. VPN
 - Necessary tools:
 - network protocol stack, ISO/OSI model
 - IP/ICMP/UDP/TCP protocols. Reliability. Retransmissions.
 - Encryption - symmetric and public key. RSA. Security. Man-in-the-middle attacks.

- VPN. Common uses. How does it work? Examples. When not to use VPN?
- OpenVPN.
 - Designing and deploying solutions
 - Server and client configuration
- 11. E-mail systems: Postfix
 - Design, installation and configuration
 - Maps and data sources
 - Postfix server - management and command-line tools
 - Procmail
 - Safe e-mail infrastructure based on Postfix and Dovecot (IMAP and POP3), monitoring its work
- 12. Security
 - Secure FTP server - vsftpd
 - TCP Wrapper
 - Log monitoring
